## **What is Soundtect?**

Soundtect is a subsidiary of Fairtech Industries, a manufacturer of exhibition carpets based in Hong Kong.

## **About Soundtect Acoustic Panels**

Soundtect launched its new line of two- and three-dimensional wall and ceiling acoustic panels in September. Soundtect has combined innovative engineering with eye-catching interior design to create these unique products that are perfect for commercial and residential uses. Even beyond function and aesthetics, the Soundtect acoustic panels are eco-friendly and made from recycled materials.

The panels were designed in eight motifs, with some layered and shaped while others are sculpted and embossed. They can be painted to match any type of decor. Soundtect's panels have superior acoustic and insulating properties that are unmatched in the industry.

Soundtect panels are made from felt, which is ideal for acoustic material. Soundtect felt is made from synthetic fibres from recycled carpets manufactured by Fairtech Industries.

The acoustic panels are attached with velcro and easy to install-perfect for the do-it-yourself decorator.

## **Who Needs Attractive Acoustic Panels?**

Acoustic panels are needed in home settings to improve sound quality and reduce noise. They also are great for music rooms and recording areas. The panels are perfect for office conference rooms, gyms, offices, restaurants, medical exam rooms, waiting rooms, and more.
